#### 1. Introduction

- After a period of research, research and learning from related projects, we have created a software with all the functions and projects required by FPT, which is building an online training management system for employees in the company. The system will include academic programs to help employees develop their expertise quickly with the help of experienced members of the company. We hope that this system will work well and help develop all trained staff as well as explain how the software works, structure and features, the software development process.

#### 1.1. Purpose

- Currently, 4.0 technology is developing rapidly, all companies and large corporations want to develop more and receive knowledge, FPT Company is no exception. With the desire to build a continuous learning environment within the corporation. Need to develop a web-based system, which manages the activity of "Training" for internal training program of the company. This system can be used to manage student accounts, manage lecturers, manage course categories, manage courses, manage topics, assign topics for courses, assign teachers for topics, assign students to the course

#### 1.2. Product Scope

Our products will help employees in the company, just log in a few websites, employees can learn anytime, anywhere. It can also be used for student account management, lecturer management, course list management, course assignment and lecture assignment for topics, student assignment. This will help employees have more expertise as well as knowledge to develop themselves, thereby helping the company to improve the quality of its personnel. We have three roles in this system, an administrator, training staff and coaches

#### 1.3. Intended Audience and Document Overview

- The intended audience of this document is all employees of FPT Corporation. Readers should have some basic knowledge to make it easier to read this document
- This document only includes a description of the product, the function of the product and how we do it, readers can read in section 2- Over Description.
- Part 3 and Part 4 are about specific requirements and other non-functional requirements. Finally there will be other requirements.

#### 1.4. Definitions, Acronyms and Abbreviations

| Table of Acronyms and Abbreviations |       |  |
|-------------------------------------|-------|--|
| Explanation                         | Terms |  |
| Software Requirements Specification | SRS   |  |
| Use Case                            | UC    |  |
| Administrator                       | AD    |  |
|                                     |       |  |

#### 1.5. Document Conventions

- This document follows the IEEE formatting requirements. Use Time New Roman font size 11, or 12 throughout the document for text. Use italics for comments. Document text should be single spaced and maintain the 1" margins found in this template. For Section and Subsection titles please follow the template.

#### 1.6. References and Acknowledgments

# 2. Overall Descriptions

#### 2.1. Product Review

- This is a website that can help administrators, training staff, and training coaches. The system uses roles such as Administrators, Training Staff, Trainee and Trainer

#### An administrator's role

- Can log into the system via the web and can manage the entire system. Permission to create / edit / delete new user accounts, assign / change usernames (if the user is already registered) and password A staff's role
- A registered trainer account provided by the administrator with a username and password, can create a trainee account by entering the details of the trainee including: Name, age, Date of birth, main programming language, TOEIC score, experience, department, ... After entering all the necessary information, the employee details will be stored in the database. The training staff is provided with a list of students to view and search. From the trainee list, training staff can also search by trainee account, programming language, TOEIC score. Can update, delete trainee accounts and can manage course categories such as search, add, update and delete course categories. The course includes the course name and description and can add topics such as topic name and topic description to a course, adding courses to the list. Instructor profiles can be managed such as adding, updating and deleting information: Instructor name, External or Internal type, workplace, phone and email addresses and can assign a trainer for a subject and may assign students to a course.

A trainer's role

#### A trainer's role

- Coaches who have been registered by the administrator can log in and can update their records such as name, age, date of birth, phone number, address, email, etc. View courses and the subject the coach is assigned

### 4. Other Non-functional Requirements

#### 4.1. Performance Requirements

- The system should be interactive and the associated latency should be low. Therefore, every system action response must be without delay. In case the user login fails, the error message pops up or the login is successful and the system allows the user to enter the main lobby, there must be a delay of less than 2 seconds. In case of opening the list or interacting with database such as editing information, it must be working in less than 2 seconds and must load up to> 95% of the files.

#### 4.2. Safety and Security Requirements

- As an education related system, the transmission of information must be safe and accurate, without any change of information. Allow AD only to control and change the information of all remaining users
- Since the system provides management tools, problem solving must ensure that the system is reliable in its operations to secure sensitive details.

#### 4.3. Software Quality Attributes

#### 4.3.1 Availability

- If internet service is interrupted while sending information to the server, the information can be resent for verification

#### 4.3.2 Usability

- As the system is easy to handle and navigates in the most expected way with no delays. In that case the system program reacts accordingly and transverses quickly between its states.

#### 4.3.3 Modifiability

- Also very important. Especially in the long run when it determines the cost of developing and maintaining the product. The relevant non-functional requirements may look like the following:
  - Upgrade to the best version right after there are curriculum updates as well as major changes made by customers
  - Has all the infrastructure in code to simplify delivery and deployment process changes.

#### 4.3.4 Testability

- There are acceptance tests for situations associated with the conversion channel
- has security checks and vulnerability scans to prevent code with security flaws

- Have 98% unit test coverage for backend and frontend code

# 5. Other Requirements
